

Dear Friends:

Welcome to SummerTrees. You enter into a world as it was meant for us to inhabit and enjoy. Since we didn't create this naturally beautiful place we were very careful not to disturb it any more than necessary.

The paved streets meander through the trees, following the natural contours of this rolling terrain. Careful engineering allows rain water to return to the earth rather than carry the polluted runoff through pipes into our lakes and streams. All utilities are buried underground thus retaining the uninterrupted beauty of SummerTrees.

Each home in SummerTrees is carefully placed so as to appear part of the natural landscape. They are clustered together in a compatible and interesting fashion. This clustering saves over 50% of beautiful wooded space for wildlife, flowers and nature trails. We at SummerTrees will help nature maintain this forest by mowing and selective trimming for better circulation of the Florida breezes.

The spring fed lakes have been deepened by us to compliment the natural drainage and to provide enjoyment to the residents.
